

Learning Management System

Manage your online learning content with the power of SharePoint®

Deliver E-Learning

Deploy and track online courses, assessments, and SCORM-compliant learning content.

Manage Events

Schedule and track events, such as instructor-led training sessions, classrooms, conferences, etc.

Produce Reports

Generate a variety of administrative, statistical, and progress reports on users and learning content.

XStream Learning Management System (LMS) is a fully functional LMS based on the Microsoft Windows SharePoint Services platform.

The LMS includes full capabilities for managing a blended learning environment of online courseware and offline events. Administrators can deploy, assign, and track online learning content (including courses, assessments, and SCORM v1.2-compliant content) as well as schedule, register, and track events of all types.

Because it is based on Microsoft SharePoint architecture, the LMS provides your user community with a familiar learning environment to facilitate effective training.

LEVERAGE YOUR SHAREPOINT INVESTMENT

Because it is built on the SharePoint platform, XStream LMS allows you to capitalize on all the built-in features and benefits of SharePoint – flexibility, scalability, productivity tools, group collaboration features, and much more.

ADD WEB PARTS FOR A CUSTOMIZED EXPERIENCE

Extend the functionality of the LMS by adding SharePoint web parts. The SharePoint foundation provides a collection of customizable web parts, including Calendar, Announcements, and URL Links.

DEPLOY AND TRACK ONLINE COURSEWARE

Online courses, exams, and SCORM-compliant learning content may be uploaded to the LMS and accessed by authorized members. Users' progress and scoring data is automatically tracked and reported by the system.

SCHEDULE EVENTS

Schedule events and track the registered attendees for each event. The system also supports self registration, allowing individual users to control their own event registrations and cancellations.

GENERATE REPORTS

Generate a wide variety of canned reports on users, groups, and content matter in the LMS. The system provides access to administrative/status reports (on user memberships, assignments, etc.), history reports (detailing user progress and session history for selected content matter), and statistical reports (detailing user scoring and other metrics for exams).

BUILD LEARNING PATHS

Create custom learning paths, which are required learning curriculums containing sets of mandatory courses and/or exams.

SPECIFY PREREQUISITES

Establish prerequisites for any learning content item in the LMS. This controls the conditions that each user must satisfy before being able to access a particular course, exam, or learning path.

CREATE OFFLINE EXAMS

Any exam in the LMS can also be saved and deployed locally (outside of the LMS) as an offline exam.

MANUALLY REGRADE USER SESSIONS

An administrator can manually update a user's recorded progress or scoring data for any learning content item.

SELF-REGISTRATION OF NEW USERS

The LMS allows new users to self-register as members by creating their own accounts online.
